

# Kirlian Photography, Chinese Acupuncture and Ultra-Physical Energy body

*Sudreh Kusti, Liberator of Spiritual Energy from its centers  
(‘Chakhra’s)*

*Dini Avaz Vol 2; No 5 and 6*

A human being is not just the sum of all his physical organs. There is much more within him, which defies his ordinary senses and sciences. Prophets said "You have God within you". The maxim is expanded by saying, "You have soul within you and the soul is a ray of God's own Light, nay, it is God Himself". The appropriate word for soul in the Zoroastrian Science would be 'Ruvan'.

Well then, if Ruvan is the Light of God within us why does it not shine?

Light, as we understand it, is a form of energy. Energy, in the simplest, sense, is something moving. Some motion, some activity, is the indication of energy. Light was once considered to be a motion in a very subtle medium, ether. It was supposed to be pervading everywhere in the universe, Even where there was nothing - absolutely nothing - there was ether, but it was unobservable and undetectable by any means. Light was a mere motion in ether i.e. it traveled in the form of regularly patterned waves in ether. So, light was waves and waves were in ether.

But somebody came up with an experiment to prove that there could not simply be any such substance like

ether in the universe; and yet light did behave like waves! That means waves were formed in nothing. Here was a motion without there being anything to move in!

And then somebody else came up with experiments to show that light was not waves; it was a stream of very very small bullets - i.e. particles. But particles of what? Not of any matter, but of energy! That again is most curious. Can 'energy' be bundled up in bullets or particles or packets? How can such an abstract thing be packed in tiny bundles?

But physicists found out that Somebody has tied up these energy bundles! They gave them some nice names like energy-quanta or energy packets or even bundles and more pompously **photons**.

Baffling thing this energy is - if at all it is a thing!

But there is a moral to the story. Energy - even physical energy of our every day experience - is not easy to understand; sometimes it is impossible to understand. That thing light, even after somebody found out that it was made up of energy packets; did not stop behaving like waves. It behaved like a wave and a particle both - a monstrous, almost ghost like, performance!

Yet it is there, everywhere. Energy is within the tiniest particle of matter; energy is in the whole universe; and of all sorts. Light is one; heat and sound and electricity are other forms of energy. And have you not come across the famous expressions presently current amongst us, (the intelligent monkeys of this small sphere) like "the nuclear energy" and "the energy crisis" - apart from "solar energy" and "muscular energy"? And yet what is it, nobody can define or even describe.

The Zoroastrian Science says, all these are physical energies which we, the mortals of the earth, do somehow experience. But in Nature there are ultra-physical and spiritual energies, which we cannot even imagine. That seems rather reasonable, isn't it? When the physical energies of our experience are so baffling, what will ultra-physical be?

These subtler energies are everywhere in Nature outside, us as also deep within us. In truth, the physical energies of the universe are the coarser forms of such subtle spiritual energies. And the energies whirling in our physical bodies (like your muscular energy or digestive energy or cell-energy or even thought energy) are also the manifestations of spiritual energies vibrating deep within us.

This means we have besides our physical bodies, same subtler energy bodies in us. Zoroastrian Science (may I hereafter call it 'Z Science' much to the relief of the printer?) gives a classification of 'bodies' of a human. (Here the word body is not confined to physical; even God is included in it as you will see further on). There are in this sense nine bodies or parts of a human being, divided in three triplets:

First triplet: Tanu, Gaetha, Azda.  
Second-, Triplet: Tevishi, Ushtan-ap, Keherp

-Third Triplet: Ruvan, - Baodhang, Fravashi

In the first triplet, Tanu and Gaetha are our physical bodies – the body made, up of exterior and interior organs like legs and liver, eyes and intestine, hair and heart – let us say the Doctor's body. The third part – Azda – of the first triplet consists of our nervous system and those other subtler systems- which experts on yogic exercises (or 'Asana's) often refer to. Azda is a regular transition from physical to' ultra-physical. Nerves and brain are physical all right but their behavior is, very often, found to be entirely inexplicable by any physical standards. They are a threshold of the subtler region within. Cross the threshold and we enter into the subtler region of Azda.

This region is a part of our ultra-physical energy body. It receives its energy from still higher and subtler energies of the second triplet Tevishi, Ushtan-ap, Keherp. But about that triplet, Later. Let me tell you something more about Azda, the transitory energy body that is subtler than the physical, but coarser, than, the second triplet.

As a workable imagination, you can think on Azda as some subtle wave front inside you pervading every point of your physical body and also spread a little bit outside, around you. I had in the issue no. 3 of Vol. 2 of this humble Dini Avaz (May-June 1977) told you about 'Aipi', a subtle etheric cloud--like body surrounding every, human being. The coarser part of this Aipi has been photographed by the Russian couple,

Kirlian's, and I was telling you the interesting story of how Kirlian almost accidentally stumbled over the astonishing discovery, and how it works.

The object to be studied, say a leaf or a human hand is placed in the specially made instrument (you may call it equipment or machine or apparatus or whatever you like) where it is subjected to a high frequency electric current. The object is then seen radiating multi-coloured lights from its various points. It seems as if the leaf or hand has various dots on it, from which the light radiates out. That baffling thing - light, again!

But forget the light and think of the dots. The human hand in Kirlian machine looks like the Milky Way in a starry sky or a fireworks display; there are sparks and glares and flashes and glitters and twinkles, all with beautiful colours.

Where does the hand get all this from? Is it the result of the electric field? The answer is: it is already there; only we don't see it, and can see only through the Kirlian apparatus. But what is that - IT?

Kirlian experiments showed some wonderful things. If a normally looking leaf was from a diseased plant, K-machine found that out. If the person whose hand or limb was placed in the machine was emotionally upset or mentally nervous or even physically tired, K-apparatus found that out. Even if a disease is approaching and there are no visible symptoms, K-machine would predict much before the actual onset.

The discovery then is that every living thing, a plant or an animal or a human has not only a physical body but also a counterpart body of energy,

The Russians have given it a bombastic name: "The Biological Plasma Body". It is the 'energy double' of every organ, tissue and even cell. It surrounds like a matrix or field around every living thing including that very important thing yourself. Some people call it AURA. And it is not the monopoly of Saints; even sinners have it. It is the part and parcel of any living thing.

And it is well organized. It has shapes and colours. In an unhealthy state, its shape is distorted or colours fade. It is affected by all your thoughts and emotions, and devotions and diseases!

And it has been found that it reacts to cosmic occurrences. The sun-spots and the moon and the coming storm and perhaps even the planetary positions affect it.

What a discovery! ! Of what is this subtle energy body made, no body knows. What is this new kind of energy, no body knows. And will any scientist know - when ordinary light behaves ghost like?

Some indications are gathered. For instance, the K-machine shows dots of light on human limbs. Perhaps each dot may be some centre of energy. It may be like a small bulb of light on a big luminescent board - the whole energy body. And when the limb has a disease actual or on - coming, these dots fade and flicker. Can there be a relation between the dots and disease? And if so, can the dots be repaired so that the disease may be cured?

Dots. . . points .....disease....  
cure. . . subtle energy centers.... why!  
Somebody is doing that since 5,000 years, it is said! Those Chinese acupuncture doctors! They do prick pins at some points on the body and claim big cures. Have their pin-pricks anything to do with Kirlian energy dots? These Chinese say we cure diseases by touching some vital points by a pin: there are about 700 such vital points on a human body. They have a chart of the body showing the 700 pin-points. Can the chart be compared with a chart of light points arrived at through K-apparatus?

That can be done and has been done.

In 1953, one Dr. Mikhail Kuzmich Gaikin came across an article on K photography. The idea of energy dots on a human body struck him with a bang. He was once a surgeon in the army and was on a front line somewhere very near China. There he had seen Chinese Doctors curing; incurable diseases only by pin-

pricks. It was unbelievable in, theory, but worked in practice with amazing success. How do you do it? He had asked the acupuncture Doctors.

They gave an explanation more amusing than their cures.

Every human has in him the Vital Energy, they explained. This runs throughout the whole body in certain well designed subtle channels. Mind, this is not the muscular energy or the energy running in nerves. It is some-thing beyond, and not discernible by any mortal means. Its channels and pathways are also too subtle to be found out. But the ancient Chinese Saint Doctors knew about this ultra physical energy and its channels and taught how to use it for curing diseases. They mapped out a chart of seven hundred points on the skin of the entire human body.

These points, they say, are in communication with each organ of the body. The Vital energy reaches the organs through the channels. The physical, mental psychological and even spiritual state of the human depends upon this energy flow. Some defect in the flow causes disease. If it is to be cured, the defect must be removed and the flow restored to its original intensity. This is done by touching with a pin one or the other of the 700 vital points on the skin, which are connected vitally with the energy channels. The mere prick at the exact point restores the balance of the energy flow in the concerned channel; the affected part or organ or place of the body starts receiving the proper vital flow again, and the disease disappears. As an instance (and it is the only one I loosely know) a point on the inside tip of the little finger of the right hand lies on the energy channel

leading to the heart. A prick on the point can cure a heart ailment!

Dr. Gaikin had heard this with awe and wonder and perhaps sceptism; but when he himself learnt acupuncture and began to apply it to his patients, his sceptism melted. They got, in fact, better and cured! Whatever the philosophy or mysticism of it, the most essential point about this 700 points prick surgery is that IT WORKS! So why bother about the mysticism behind it?

But when Dr. Gaikin read about Kirlian, he sat amazed! Are the K-dots same as acupuncture points? That must be found out. He traveled right from Lehingrad to Krasnodar, southeast of Crimea, a very long distance. But it was a scientific pilgrimage. Here was, perhaps, a modern proof of an ancient Science. He arrived and met the Kirlians.....

I may remind you that our present subject is Sudreh-Kushti. I have enunciated the Truth about them that they are liberators of our inner spiritual energy and absorbers of the external Yazatic Energies. To elaborate this Truth, I am talking to you about inner energies in a human being and that is the how the physical energies, the ghost performance of light, ultra physical energies, K-photography, Chinese acupuncture, vital energy points and channels, energy body, bio-plasmic body and aura - have entered in our discussion. Don't you find it interesting? .....More will follow, I assure you.

Z-Science is the Science of all sciences.

(To be continued)
